

Central Florida Neurosurgery Institute

Dr. Hunaldo J. Villalobos

EDUCATION AND CERTIFICATIONS: Fellow of American Association of Neurological Surgeons (FAANS), Fellow of American College of Surgeons (FACS). **PROFESSIONAL MEMBERSHIPS/AFFILIATIONS:** American Association of Neurological Surgeons, American College of Surgeons, Congress of Neurological Surgeons, Pan-American Medical Association. **GREATEST PERSONAL ACHIEVEMENT:** My family and the ability to balance family and my demanding profession. It is a privilege to practice Neurosurgery and to help people recover from life-threatening and life-limiting conditions. **SPECIALTIES:** Neck & Lower Back Pain (Cervical, Lumbar Discs and Degenerative Disorders); Spinal Column Reconstruction (Spinal Fusions and Instrumentations); Kyphoplasty (Procedure for Thoracic & Lumbar Fractures); Trigeminal Neuralgia & Atypical Facial Pain; Neuroendoscopic Procedures; Gamma Knife Skull Base Lesions; Minimally Invasive Surgical Procedures; Brain Tumors with a specialization in Pituitary Tumors; Primary & Metastatic Brain Lesions or Mass. **INNOVATIONS:** Minimally Invasive Neurosurgery for Spine and Brain. Dr. Villalobos uses Robotics and Image Guidance combined with Minimally Invasive Spine Surgery Techniques, which allow for greater precision and a smaller incision, a shorter hospital stay, a quicker recovery and less discomfort than patients would have with a traditional open procedure. Endoscopic Surgical Techniques are used for brain tumor resections and can also be combined with

Image Guidance; these minimally invasive techniques also allow for greater precision, a quicker recovery, and less trauma to the brain. **OFF HOURS:** Dr. Villalobos enjoys cycling around Central Florida and frequently participates in local cycling events. He also enjoys scuba diving and taekwondo, a hobby he shares with his children. **FREE ADVICE:** Patients with neck and back conditions should always research their treatment options and include conservative care options in their treatment plan because not every patient needs surgery. It is important to make healthy lifestyle choices which will strengthen your body. A strong body, specifically a strong core, will help protect you from a spinal injury. The best plan is not treating the injury but avoiding the injury.
